

TTA announces new and expanded facilities to support its growth in the Mass Transit business.

TTA has been expanding facilities and staff to increase our capabilities to support our customers needs.

In 2003 we expanded and reorganized our facilities in Bath, NY, and opened a new 113,000 square foot facility in nearby Hornell, adding new equipment and resources to both locations. A new 15,600 square foot addition to the Hornell facility will open in early 2004 to provide us the latest state-of-the-art facility for our truck overhaul and new truck assembly contracts.

In the same period we have expanded and improved our resources, skills and team to enhance our commitment to fulfilling contract obligations, and continue to meet our promise of achieving superior customer service.

TTA is ready to accept all challenges in refurbishment of existing railcars, assembly of new railcars, and system and component supply – to meet your needs. We encourage and welcome your enquiries, and will ensure timely responses to all requests for information, quotations and proposals.

TTA is a full-service passenger railcar assembler and overhaul company headquartered in Bath, New York.

Flexibility, Quality & Superior Customer Service.
